

MODEM FOR EDC - Requires a dedicated phone jack like your fax line, but a different phone number.

## SAMPLE CONFIGURATION

The Office PC and the Workstations are all wired to the network hub or patch panel via category 5 UTP cable for an ethernet 10-base-T network.

The Kitchen & Bar Remote Printers are all wired to the nearest Workstation (one remote printer per terminal) with the same cabling leaving a 7 feet cat 5 patch cable at each end. The check printer cables are provided by JCR.

Cabling must be at least 3 feet away from parallel ac lines and cannot run over florescent lights. A clean dedicated line preferably with an isolated ground is necessary for the entire system.
